## Embedded Linux BSPs and Device Drivers – On-Line Course

You will have 180 days to access the on-line course.

*Register Now*

Embedded Linux Board Support Packages  
and Device Drivers (EL805)

Lecturer – Mike McCullough is President and CEO of RTETC, LLC. Mike has a BS in Computer Engineering and an MS in Systems Engineering from Boston University. A 20-year electronics veteran, he has held various positions at LynuxWorks, Tilera, Embedded Planet, Wind River Systems,

**IEEE Boston  
Sponsored  
Conferences &  
Events**

Lockheed Sanders, Stratus Computer and Apollo Computer. RTETC, LLC is a provider of Eclipse-based software development tools, training and consulting services for the embedded systems market.

**Course Summary** – This video course provides advanced training in the development of Embedded Linux Board Support Packages (BSPs) and Device Drivers. The first part of the course focuses on BSP and Software Development Kit (SDK) development in an Embedded Linux context with a focus on application performance measurement and improvement. The latter part of the course covers Embedded Linux Device Driver development including key device driver decisions and deployment considerations for Embedded Linux BSPs.

**Who Should Attend** – The course is designed for real-time engineers who are developing Embedded Linux BSPs and Device Drivers for Embedded Linux distributions. It is also targeted at experienced developers requiring a refresher course on Linux BSP and Device Driver development.

### Course Objectives

- To gain an understanding of the complexities of BSP and SDK development and their uses in Embedded Linux systems.
- To provide a basic understanding of the Linux I/O Subsystem and the Device Driver Models provided with Embedded Linux distributions.
- To gain an in-depth understanding of character-based device drivers in Embedded Linux
- To understand key device driver subsystems including relatively slow I/O interconnects such as I2C, SPI and USB as well as high-speed interfaces such as Ethernet, USB 3.0 and PCIe
- To give students the confidence to apply these concepts to their next Embedded Linux project.

### Course Schedule

Getting Started with Embedded Linux

September 22 - 24, 2020

2020 IEEE High Performance  
Extreme Computing Conference  
(HPEC '20)

## Online Courses

Fundamentals of Real-Time  
Operating Systems (RT201) On-  
Line Course

Design Thinking For Technical  
Work

Verilog 101: Verilog Foundations

SystemVerilog 101 (SV101):  
Design Constructs

SystemVerilog 102 (SV102):  
Verification Constructs

High Performance Project  
Management

Introduction to Embedded Linux

Software Development for Medical  
Device Manufacturers

Fundamental Mathematics  
Concepts Relating to  
Electromagnetics

Reliability Engineering for the  
Business World

Embedded Linux Optimization

Embedded Linux Training Overview  
 Linux Terminology, History and the GPL  
 Building the Kernel Source Code  
 Embedded Linux Kernels  
 BSPs and SDKs  
 Linux References (Books and Online)  
 BSP Requirements  
 U-Boot and Bootloader Development  
 Embedded Linux BSP Development Basics  
 Basic BSP Development  
 Files and Filesystem Support  
 The I/O Subsystem: Talking to Hardware  
 Memory Management and Paging  
 Error Handling in Embedded Linux BSPs  
 Timing and Timers  
 Interrupt and Exception Handling in BSPs  
 BSP Deployment Issues and Practices  
 Embedded Linux SDK Basics  
 The 3 Pieces of an SDK  
 Embedded Linux Distributions and the GNU Compiler  
 Collection (GCC)  
 Other Embedded Linux Development Tools  
 Library Support, Glibc and Alternatives  
 SDK Deployment and Support  
 Debugging  
 GDB, GDB Server and the GDB Server Debugger  
 Other Debug and Test Tools  
 An Eclipse Remote Debug Example  
 Advanced Debug with printk and syslogd  
 System-Level Debug  
 System-Level Debug Tools  
 The /proc and sys Filesystems  
 Advanced Logging Methods  
 KGDB and KDB  
 Crash Dumps  
 Debugging Embedded Linux Systems  
 Configuring Embedded Linux  
 Config Methods  
 Config Syntax

Embedded Linux BSPs and Device Drivers

- Configuring the Device Driver
- A Simulated Device Driver
- Modularization Revisited
- The Evolution of a New Driver Model
- The Initial Object-Oriented Approach
- Platform Devices and Drivers
- A Generic Subsystem Model
- The Generic Subsystem Model in Detail
- Subsystem Registration
- The Probe and Init Functions
- The Show and Store Functions
- User Access via the /sys Filesystem
- Configuring the New Device Driver
- The udev Linux Application
- Comparing the Two Driver Models
- The Flattened Device Tree (FDT)
- openBoot and its Effect on Embedded Linux
- The Device Tree Script (dts) File
- The Device Tree Compiler (dtc)
- The Device Tree Blob (dtb) File
- Building a dtb File
- Hybrid Device Drivers
- Other fops Functions
- The Need for ioctl
- Linux Device Driver Subsystems
- Direct Connect Device Drivers
- Serial/Console Drivers, I2C & SPI
- Real-Time Clocks and Watchdogs
- GPIO and the Pinmux
- Flash MTDs and Direct Memory Access
- USB, Power and CPU Management
- Video and Audio
- PCI and VME
- Block Devices
- RAMdisk and Flash Filesystems
- MMCs and SD Cards
- Network Device Drivers
- MAC and PHY Device Drivers
- net\_device and net\_device\_stats

Network Device Initialization  
Device Discovery and Dynamic Initialization  
Network Interface Registration  
Network Interface Service Functions  
Receiving and Transmitting Packets  
Notifier Chains and Device Status Notification  
Unwired Device Drivers  
Wireless Device Drivers (WiFi, WLAN)  
Bluetooth and BlueZ  
Infrared and IrDA  
Cellular from 2G to 5G  
Drivers in User Space  
Accessing I/O and Memory Regions  
User Mode SCSI, USB and I2C  
UIO  
High-Speed Interconnects  
PCIe  
iSCSI  
Infiniband  
FibreChannel  
Debugging Device Drivers  
kdb, kgdb and JTAG  
Kernel Probes  
Kexec and Kdump  
Kernel Profiling  
User Mode Linux  
Performance Tuning Device Drivers

Some Final Recommendations

Course Fee: \$350.00
